Leakage protection plug

Derwent Title:

❖ Original Title:

 CN1350352A: LEAKAGE PROTECTION PLUG

Assignee:

LIU J Individual

Inventor:

Liuj;

Accession/ 2002-558717 / 200260

Update:

H01R 13/66 ; H01R 13/70 ; H02H 3/32 ;

IPC Code:

Derwent Classes:

V04: X13;

Manual Codes:

V04-D05(Structural association with electrical component) , X13-C01D(Difference between magnitudes or phase of voltages or currents)

Derwent

Abstract:

(CN1350352A) **Novelty** - A multi-function leakage protection plug not only can prevent the electric shock accident caused by electrical appliance fault but also can prevent the electric shock accident caused by the power source fault. Therefore, it has earth line live line detecting inductor in the earth line of power source line, zero sequence current mutual inductor, a pair of contact terminal setting between the sub-breaker to each line of phase, zero and earth within the plug, a spring at between the sub-breaker upper end and the copper leaf of earth line active contact terminal to let the spring force attracting to each other always exist on the pair of earth line contact terminal. The safety requirement in electrical operation can be achieved by connecting earth line first and then phase and zero lines or cutting of phase and zero lines first and then earth line when the free releasing device is acting. No matter the residual current exists between phase and zero lines or the abnormal current exists on the earth line three electrodes in the plug will be cut off simultaneously.
